

Download 6 5 Practice The Quadratic Formula And Discriminant Answers

Demonstrates graphically the relationship between the discriminant of the Quadratic Formula and the number of x-intercepts on the graph. Solve Quadratic Equations Using Discriminants (1) This is a tutorial on using the discriminant and the quadratic formula to solve quadratic equations. After completing this tutorial, you should be able to: Solve quadratic equations by factoring. Solve quadratic equations by the square root method. Sal solves the equation $-x^2+8x=1$ by first bringing it to standard form and then using the quadratic formula.
